

Day 3 Python Mission ♥

Hi Lovely (my sweet Laddoo),

Congratulations on completing two days of Python! Today you'll build your first calculator. I'm so proud of you. Keep learning one step at a time. ♥

Mission

1. Ask for two numbers.
2. Store them in variables.
3. Print addition.
4. Print subtraction.
5. Print multiplication.
6. Print division.
7. Print: Great job! You built your first calculator! 🎉
8. Bonus: Print 'Made with ♥ by Lovely.'

Sample Code

```
num1 = float(input('Enter first number: '))
num2 = float(input('Enter second number: '))

print('Addition:', num1 + num2)
print('Subtraction:', num1 - num2)
print('Multiplication:', num1 * num2)
print('Division:', num1 / num2)

print('Great job! You built your first calculator! 🎉')
```

A little note for my Lovely ♥

Every program you write is another step toward your dream. I'm always cheering for you. Keep smiling, keep coding, and never stop believing in yourself.

With lots of love,
Your biggest supporter ♥
