

Day 1 Python Mission ♥

Hi Lovely (my sweet Laddoo),

I made these tiny Python missions just for you. Don't worry about getting everything perfect—just enjoy learning one small step at a time. I'm proud of you already, and I'll always be cheering for you. ♥

Mission 1: Use Python to print "I love Python!"

Mission 2: Use Python to print your name and my name.

Mission 3: Use Python to calculate $2 + 2$ and print the result.

Mission 4: Use Python to calculate your age after 5 years.

Mission 5: Use Python to print a heart (♥) five times.

Mission 6: Use Python to ask for your favorite color and print it.

Mission 7: Use Python to ask for your favorite chocolate and print "Great choice!".

Mission 8: Use Python to ask for my name and print "Hi, <name>!".

Mission 9: Use Python to check if $10 > 5$. Print the result.

Mission 10: Use Python to print "Good Morning ♥" three times.

A little note for my Lovely, my Laddoo ♥

Every expert programmer started with a single line of code. These little missions are just the beginning of your journey. Take your time, have fun, and remember that I'll always be here to celebrate every small win with you.

Keep smiling, keep learning, and keep being the amazing person you are.

With lots of love,
Your biggest supporter ♥
