

♥■ Day 8 Python Mission

Hi Lovely (my sweet Laddoo),

Every day you practice, you're proving that consistency is more powerful than perfection. I'm really proud of you for showing up again today.

Yesterday you learned comparison operators (< and >). Today we'll revise everything and learn just one tiny new idea: the equality operator ==. It checks whether two values are the same. That's all for today—one small step at a time. ■

■ Python Missions

1. Print your name and your favorite color.
2. Create variables: book, pages, city. Print them.
3. Ask the user for two numbers and print their sum.
4. Print the result of 5 == 5.
5. Print the result of 7 == 3.
6. Create marks = 50. Use if...else to print Pass if marks == 50, otherwise Try Again.
7. Create lucky = 8. Print Yes if lucky == 8, otherwise No.
8. Print numbers from 1 to 5 using a for loop.
9. Print 'I can do it!' three times using a loop.
10. Print: See you tomorrow for Day 9! ♥■

You're doing something amazing—building a new skill one tiny lesson at a time. Keep smiling, keep practicing, and remember that every expert once started exactly where you are today. ■

**With lots of love,
Your biggest supporter ♥■**
