

♥ Day 9 Python Mission

Hi Lovely (my sweet Laddoo),

I'm so happy to see you reaching Day 9. Every little program you write is another step toward becoming confident in Python. You don't need to be fast—you only need to keep going.

Yesterday you learned the equality operator (`==`). Today we'll learn just one tiny new idea: `!=` (not equal to). It checks whether two values are different. That's all for today—one small step, one big smile. ♥

□ Python Missions

1. Print your favorite food.
2. Create variables: fruit, price, and city. Print them.
3. Ask the user for their name and print: Hello, <name>!
4. Print the result of `8 != 5`.
5. Print the result of `10 != 10`.
6. Create `age = 18`. Use `if...else` to print "Adult" if `age != 17`, otherwise print "Seventeen".
7. Create `color = "red"`. Print "Different" if `color != "blue"`, otherwise print "Same".
8. Print numbers from 5 to 1 using a for loop.
9. Print "Python is fun!" four times using a loop.
10. Print: "See you tomorrow for Day 10!" ♥

You're making steady progress, and that's something to be proud of. Keep believing in yourself, keep practicing a little every day, and remember that I'm cheering for you from the sidelines.

With lots of love,

Your biggest supporter ♥
